

BIG FOUR FREEDOM WALL

Cuasi, Tulabot, Villanueva

- Big Four Freedom Wall is a web application that creates a platform for students from the big four universities: UP, ADMU, UST, and DLSU, wherein they can submit and discuss on contents that other users have submitted with similar interest. Essentially, it's a collection of posts where users can participate and check what's happening at other universities. Registered users can contribute to the site with content and just share what they want or what they feel by staying anonymous or having a persona by securing a username.

I. Features

- Register/Sign-Up
 - In order for the user to post and participate in a content, the user must first register their account using their respective university's email (using Google Signup) then a username and password to create their own account. The user also has an option to put a short bio so other users can know what interests they prefer.
- Log-in
 - After successfully completing the registration and creating an account, the user can now log-in and can now begin browsing recent and trending posts in the community.
- Log-out
 - A user also has an option to log-out from their account.
- Submit Post
 - A user can decide whether they may want to write their own post such as texts, pictures, videos, and link. In addition, the user is encouraged to select a tag/s that categorizes the content so other users can easily search post.
- Edit Post
 - Option to edit a post done by the user. Editing the post will reset the upvotes and downvotes of the post.
- Delete Post
 - Option to delete a post done by the user. Deleting will also remove the upvote and downvote of the post that will affect the credit score of the user.
- Comment
 - A user can write comments/replies to other user's posts and to their own post as well. If users write comments under a post, it will then develop into a thread. The thread will be arranged the resulting discussion into a tree structure so users can easily see which reply belongs to which comment.
- Edit Comment
 - Option to edit a comment done by the user. Editing the comment will reset the upvotes and downvotes of the post.
- Delete Comment
 - Option to delete a comment done by the user. Deleting will also remove the upvote and downvote of the comment that will affect the credit score of the user.
- Upvote
 - Upvoting a post or a comment can be only done once. The more upvotes a post or a comment gets, the more frequent other users will see your post. When the users decide to edit their post or comments, the upvotes are reset to 0.
- Downvote
 - Downvoting a post or a comment can only be done once. On the contrary with upvote, the more downvotes your content gets, it also decreases the visibility of your content to other users. The downvotes will be reset too if the user decides to edit their post or comments.
- Credit Score
 - Credit Score keeps track of the number of upvotes a user has in all of its posts and comments given by other users. The user can also earn

CCAPDEV MP Specifications

credit score by posting their own content and lose credit score when other users downvote their post or comment. The higher the credit score a user has, the more frequent their posts or comments will be seen.

- If the user has merit a negative credit score, the user will be notified that his/her account may be blocked or be deleted.

| Credit Score Points Computation | |
|------------------------------------|-----------|
| 1 post | +5 credit |
| 1 comment | +3 credit |
| 1 upvote (in comment or in post) | +1 credit |
| 1 downvote (in comment or in post) | -1 credit |

| Credit Score Points Benchmark | |
|-------------------------------|--------------------|
| Below -50 score | Notify the user |
| Below -100 score | Delete the account |

- Sort
 - Option to filter the posts/threads being shown according to:
 - New - sort posts to recently posted by users
 - Trending - sort posts that is receiving a lot of upvotes
 - College - sort posts based on what school/s the user prefers: Ateneo, UP, Lasalle, UST
- Search
 - This option allows the user to input a tag/s that will show the post/s or thread/s that contains those tags.
- Save Post
 - The user also has an option to privately save posts so that the user has a choice to view it later.
- View User Profile
 - A user can view its username, recent posts, save posts, and credit score in this feature

- View profile of other users
 - Users can view the profile of other users and can view their short bio, posts, and credit score.
- Share Post
 - The user has an option to share a post to other social media sites.
- View All Post
 - This is going to be the mainframe of the website and this is where the user can see all of the posts submitted by different users and a maximum of three comments can see per post.
- View Specific Post
 - The user can view a specific post by clicking on the post and they can upvote/downvote, comment, share, and save the post. This will show detailed comments to be viewed compared to the timeline.
